

College of Science Guidelines – Collection of Papers for PhD Thesis - February 2017

Peer reviewed papers may be incorporated into a thesis submitted for the award of a research degree to avoid any duplication of if the following conditions are met:

1. The work described in the papers is substantively that of the candidate and has been carried out during the period that the candidate has been registered for the research degree. Work published, accepted for publication, or submitted for publication prior to candidature must not be included in the thesis.
2. The thesis contains
 - a. A general introduction that incorporates an independent, original and up-to-date review of existing work in the field which contextualises the candidate's research in relation to the present state of knowledge in the field
 - b. Chapters containing the published work in a cogent sequence that support the main findings of the thesis
 - c. An independent and original general discussion that draws together the main findings of the thesis in the context of their original contribution to current knowledge, establishes the significance of the work and outlines the needs and prospects for future research
3. The candidate is the sole author of the thesis, is fully responsible for everything contained in it and, where necessary, has obtained the necessary permission regarding copyright from the copyright holders. A statement to this effect must be included in the thesis.

Work that has been submitted but not yet accepted for publication or work in preparation for publication may be included in the thesis, but must be clearly distinguished from work that has been published or accepted for publication and the level of readiness of the papers must be stated

Where the papers presented in the thesis have been jointly authored, the nature and extent of the candidate's contribution must be precisely identified in a statement that delineates the nature and extent of the candidate's intellectual input to each paper and their direct contribution to the work reported (e.g. which figures or passages of text represent the original work of the candidate). This should be done by chapter

Thesis Structure:

The thesis incorporating publications must read as a coherent whole. Each section should be referenced separately. Where papers have been published with different fonts and formats, the original manuscripts should be re-formatted so that the format throughout the thesis is uniform providing an easily read, professional appearance. Where desired, the original manuscripts can be bound into the thesis as appendices. For more information please see

Declaration of co-authorship

This form is to be completed by the student and reviewed and confirmed at DSP/School level

Name:	
Student Number:	E-mail:
School:	
Principal supervisor:	E-mail:
Research Degree for which thesis is being submitted:	
Title of Research thesis:	
This co-authorship declaration applies to the following paper:	

College of Science Guidelines – Collection of Papers for PhD Thesis - February 2017

The student’s contribution to the paper

(Outline briefly the student’s intellectual and practical contribution to the research presented in the paper. A percentage figure only will not suffice). This should be separated into science and theory basis.

Other Authors contribution to the paper

(Outline briefly the contribution of other authors to the paper)

Author	Contribution
